## Dean Infotech Announces Launch of E Booking System - A Powerful Asset Management Software

PRESS RELEASE - FARIDABAD, INDIA - NOV 22, 2014

**Dean Infotech, a leading web and software development agency based in India is pleased to announce another feather in the cap of its prestigious achievements - the launch of an E Booking system that helps small and mid-sized enterprises to keep track**

We are proud of our hardworking team of 20+ talented software professionals who've made this project a huge success by proposing an integrated software solution to handle all the important tasks, functions and events – all at one place with minimum hassle and considerably less effort. The idea germinated when one of our South Africa clients asked us to develop a customized software with which one can register their assets, record bookings and manage events using a single interface. What next? Our enthusiastic team who's always up at the service of clients decided to implement the idea as soon as possible and come up with an innovative solution to meet the complex needs of small and mid-sized businesses. At the very outset, we decided to analyse requirements and complex scenarios involving the process and proposed solutions to mitigate common problems clients encounter while dealing with a huge database of customers or their own clients who outsource projects to them. After we're done with the comprehensive Requirements Specification Document stating all the details, we quickly designed a UI model that clients can easily get their hands-on. Here, the topmost priority was given to an easy to use interface simple enough that clients can easily understand and work with minimum hassle. To test usability, we tried two variations of the user interface designs and then finalised the one based on smooth user experience. Next, our database management experts quickly set up a backend for the software to work with 100% efficiency and at last everything was integrated to yield Online Booking Management System -excellent software that can work well with all the operating systems and platforms. In our beta phase, we started trial run of the E-booking management system software (<http://ebooking.deaninfotech.com/>) by distributing it to some of our reputed clients to identify bugs and fix them in the final version. After this last round of testing, we finally launched it after 2 months of rigorous hard work i.e. on 15th November, 2014 for commercial use.

### **What can our E-Booking Management System do for you??**

Basically our software E-booking management system caters to every business size and is helpful for both B2B and B2C clients as powerful asset management software. In day to day life, managing assets for a company is not as easy as it seems to be, especially when the

turnover is greater than 1 crore. And one can't just ignore the problems that arise when the company needs to employ multiple people for such tasks. Also, it's sheer wastage of time, money and most importantly the human resource. While the results may still not be as impressive as you get from the implementation of software rather than just manual. Imagine how easy it would be if a software does it all for you – managing everything with 100% efficiency and well executed services; register all your company assets, book events through a single window and deliver services on schedule. Wow, isn't it? So, yes we have developed the software to wow our clients and help increase their revenue by leaps and bounds. So, below I'm summarising in 10 important points how can our software help solve problems of your business. I'm sure you will find them pretty good and would find all the functions and implementation indispensable to our business digital architecture.

### Characteristics of Dean E-Booking System

1. **Highly Secure** – Dean Online Booking System gives utmost importance to security and hence we have created software that is 100% secure and can't be easily hacked by antisocial elements.
2. **Easily Customizable** – We know that you may have different goals and objectives to accomplish and hence you may need to tweak the software completely as per your needs. So we have developed the software with modular codes to make it easy for our clients to further customize it if they want.
3. **Highly Robust** – Robustness of software allows it to cope up with execution errors and handle exceptions. We have designed Dean Booking Management System as highly robust software having the ability to continue operation despite abnormalities in input, calculations etc.
4. **Simple UI** - Dean E-booking System has an easy to use, extremely simple yet elegant user interface that provides regular updates to arrange IT operations and services in a timely manner.
5. **Comprehensive Reporting** – Dean E-booking system generates personalized reports and statistics of everything managed within the dashboard so that you can keep track of events very easily.
